# TDB COMBI LEVELLER

## Type Tilt

**If you're looking for a leveller that you can use in combination with a larger wheel loader and you regularly work on complex models and projects, then the TDB Combi Leveller Type Tilt is ideal!**

## What to expect?

The TDB Combi Leveller Type Tilt is perfect for wider machines. The leveller is equipped with a tilt unit on the quick coupler, allowing the machine to tilt independently of the leveller using tilt cylinders. One side of the tilt unit has a unique shape to maintain as much surface support as possible during movement. All controls for the leveller are housed under a cover, providing protection for the mechanisms while also giving the leveller a clean appearance.

**The Leveller in real life**

**Tilt Unit on the Quick Coupler**
The tilt unit allows the leveller to move independently of the machine.

**Bucket and Leveller in One**
No need to unnecessarily switch between attachments.

**Optimal Compaction**
The weight of the material in the bucket ensures optimal compaction.

**Option for Hydraulic Doors**
Operate the doors using joystick controls from the cabin.

**Quick & Easy Coupling**
Connect using two hydraulic couplings and one 10-pin connector.
