THEO DE BRUYN BV
SINCE 1993

TDB AUTOMATIC TILT FRAME

As an operator of a Skid Steer, Loader, or Mini Excavator with a triple boom, you'll find the TDB Automatic Tilt Frame ideal for you!

What to expect?

The TDB Automatic Tilt Frame works in combination with tilt control, operated via the machine's extra function. Height adjustment is automated on the machine's arm through servo or CANBUS control. With this frame, you're ready to tackle a range of tasks, including spreading material, clearing edges and finishing surfaces, all with just one attachment. Wear parts can be quickly and easily replaced.

The Frame in real life

Budget-Proof
Affordable without compromising on quality.

Simple in design
No unnecessary frills, just pure functionality.

Servo or CANBUS control
Modern and efficient. No need to install a main valve on the machine.

Automatic and manual
Automatic tilt control combined with manual height adjustment.

Versatile in use.
Spread material, clear edges, and finish surfaces. All in one.
